

Field Studies Information Sheet – October 2016

The Vancouver Fraser Port Authority is continuing field studies in October 2016 as part of ongoing environmental and technical work for the Container Capacity Improvement Program.

Container Capacity Improvement Program

The Container Capacity Improvement Program was announced in 2011, and is the port authority's long-term strategy to ensure the timely delivery of required infrastructure to meet anticipated growth in the container sector. A key objective of the program is the use and capacity maximization of existing terminals before the construction of any new facilities. In planning for future capacity with this objective, the port authority considered opportunities to:

- Increase the capacity and efficiency of existing container terminals;
- Convert existing under-utilized terminals to handle containers; and
- Build a new terminal.

Improvements to existing container terminals within the port authority's jurisdiction include:

- The Deltaport Terminal, Road and Rail Improvement Project (currently underway); and
- The Centerm Expansion Project (planning).

Roberts Bank Terminal 2 Project

The Roberts Bank Terminal 2 Project is a proposed new three-berth container terminal that would provide 2.4 million twenty-foot equivalent units (TEUs) of additional container capacity annually.

No decision has been made to proceed with the proposed Roberts Bank Terminal 2 Project. The port authority is undertaking a comprehensive multi-round, multi-year community, stakeholder and public consultation process regarding the project. Please visit www.portvancouver.com/RBT2 for more information, including past consultation materials.

The Roberts Bank Terminal 2 Project is undergoing a federal environmental assessment by an independent review panel, under the *Canadian Environmental Assessment Act, 2012*. The Project is also undergoing an assessment under the British Columbia *Environmental Assessment Act*, and requires other permits and authorizations before it can proceed.

Field Studies – October 2016

An overview of field studies that will be taking place in September 2016 is below.

Overview
Coastal Geomorphology
Abiotic Parameters Study
Fresh Water Fish and Fish Habitat
Fresh Water Fish Sampling
Marine Mammals
Marine Mammal Observation Study
Geotechnical Conditions
Supplemental Geotechnical Investigations

Some field studies taking place in October may require environmental authorizations and/or access to public and private land. Prior to starting any studies, the port authority will obtain any required permits and landowner permission before accessing private property.

The port authority has produced monthly field studies information sheets summarizing work planned during that month. Past updates regarding the Roberts Bank Terminal 2 Project are available at www.portvancouver.com/RBT2.

Study Name	Summary
<p>Coastal Geomorphology – Abiotic Parameters Study</p> <p>(continued from September 2016)</p>	<p><u>Purpose:</u> To determine the physical conditions (e.g., temperature and salinity) influencing biofilm presence and distribution at Roberts Bank.</p> <p><u>Study Area:</u> Roberts Bank in the upper and mid intertidal zones north of the Roberts Bank causeway.</p> <p><u>Methods:</u> Water quality measurements (conductivity, temperature and depth) will be recorded in the mid and upper intertidal zones of Roberts Bank.</p> <p><u>Timing:</u> This study is anticipated to continue in October 2016.</p>
<p>Fresh Water Fish and Fish Habitat – Fresh Water Fish Sampling</p>	<p><u>Purpose:</u> To document the presence of fish species within ditches on the north side of the Deltaport Way Overpass.</p> <p><u>Study Area:</u> Ditches on the north side of the Deltaport Way Overpass in Delta, B.C.</p> <p><u>Methods:</u> Fish traps will be placed in ditches overnight. Fish captured in the trap will be identified to species, counted and then released.</p> <p><u>Timing:</u> This study is anticipated to be conducted in October 2016.</p>
<p>Marine Mammals – Marine Mammal Observation Study</p> <p>(continued from September 2016)</p>	<p><u>Purpose:</u> To document marine mammal presence and behaviour in the waters surrounding the marine terminals at Roberts Bank.</p> <p><u>Study Area:</u> The waters in the vicinity of the marine terminals at Roberts Bank.</p> <p><u>Methods:</u> A ground-based remote video surveillance system will be used to observe the proposed project footprint for marine mammals.</p> <p><u>Timing:</u> To continue in October 2016 during daylight hours.</p>

Study Name	Summary
Geotechnical Conditions – Supplemental Geotechnical Investigations (continued from September 2016)	<p><u>Purpose:</u> To conduct a supplementary geotechnical investigation within the footprint of the proposed Roberts Bank Terminal 2.</p> <p><u>Study Area:</u> Drilling will be undertaken in and around the planned footprint of elements of the Roberts Bank Terminal 2 Project, including the marine terminal and widened causeway.</p> <p><u>Methods:</u> Drilling will be carried out using sonic drilling and cone penetration testing equipment mounted on a marine barge in the marine environment and on a truck for the land-based sites. In the marine environment, an accompanying tug boat will anchor the marine barge in specific locations to reduce marine disturbance. Upon completion of drilling, the tug boat will pull up the anchors and tow the barge to the next location, leaving no structures on the seafloor. Land-based drilling will take place during low tide hours, and all equipment will be removed from the site during higher tide hours.</p> <p>Collected samples will be analyzed to characterize sediment physical and chemical properties.</p> <p><u>Timing:</u> To continue in October 2016.</p>
