

**Field Studies Information Sheet – November 2019**

The Vancouver Fraser Port Authority is continuing field studies in November 2019 as part of ongoing environmental and technical work for the Roberts Bank Terminal 2 Project.

**Roberts Bank Terminal 2 Project**

The [Roberts Bank Terminal 2 Project](#) is a proposed new three-berth container terminal that would provide 2.4 million TEUs of additional container capacity annually. The Roberts Bank Terminal 2 Project is undergoing a federal environmental assessment by an independent review panel, under the *Canadian Environmental Assessment Act, 2012*, and requires other permits and authorizations before it can proceed. Please visit [www.portvancouver.com/RBT2](http://www.portvancouver.com/RBT2) for more information, including past consultation materials, to learn more about the project.

**Field Studies – November 2019**

An overview of field studies that will be taking place in November 2019 is below.

<b>Overview</b>
<b>Coastal Geomorphology</b>
Abiotic Parameters Study
<b>Marine Vegetation and Invertebrates</b>
Subtidal Habitat Survey

Some field studies taking place in November require environmental authorizations and/or access to public and private land. Prior to starting any studies, the port authority will obtain any required permits and landowner permission before accessing private property.

The port authority has produced monthly field studies information sheets summarizing work planned during that month. Past updates regarding the Roberts Bank Terminal 2 Project are available at [www.portvancouver.com/RBT2](http://www.portvancouver.com/RBT2).

A description of each field study listed above is provided on page 2.

Study Name	Summary
<b>Coastal Geomorphology – Abiotic Parameters Study</b>  (continued from October 2019)	<p><u>Purpose:</u> To determine the physical conditions (e.g., temperature and salinity) influencing biofilm presence and distribution at Roberts Bank.</p> <p><u>Study Area:</u> Roberts Bank in the upper and mid-intertidal zones north of the Roberts Bank causeway.</p> <p><u>Methods:</u> Water quality measurements (conductivity, temperature, and depth) will be recorded in the mid and upper intertidal zones of Roberts Bank.</p> <p><u>Timing:</u> This study will continue in November 2019.</p>
<b>Marine Vegetation and Invertebrates – Subtidal Habitat Survey</b>  (continued from October 2019)	<p><u>Purpose:</u> To obtain field data on the distribution of subtidal marine vegetation, orange sea pen distribution, infaunal and bivalve communities, and fish habitats.</p> <p><u>Study Area:</u> The subtidal zone at Roberts Bank within, and adjacent to, the proposed terminal footprint.</p> <p><u>Methods:</u> Bathymetric and underwater videography data will be collected using vessel-based side scan sonar and a remotely operated vehicle to map subtidal marine vegetation, invertebrates and fish habitats. Sediment samples will be collected using a sediment grab sampler deployed from a boat. Samples will be sieved for infaunal macroinvertebrates and sent to a laboratory for quantification, biomass estimation, and taxonomic identification.</p> <p><u>Timing:</u> This study began in October 2019 and will continue in November 2019. Data on marine vegetation will be collected in January and February 2020 as part of SCUBA surveys.</p>
